

Do you have a **penicillin allergy**?

9 out of 10 patients with a penicillin-allergy record are **not truly allergic** when tested.

Penicillins are the **recommended best** treatment for many infections.

Taking other antibiotics:

- may take longer to resolve your symptoms
- may cause you more side-effects
- has contributed to the rise in antibiotic resistant bacteria
- could be more costly to the NHS

If you are registered to the following practices: *(include practice name)*

..... then

Ask your **Pharmacist** about the **ALABAMA Study**
and how **YOU** can take part
